VIRTUAL TRYING ON OF CLOTHES USING  
GENERATIVE NEURAL NETWORKS

MADRIGAL | NAVARRO | TUMAMBING | WHITE

“ADD TO CART” HAS BECOME THE NEW MAGIC WORD!

## NEW REALITIES

### 01

---

#### e-commerce has grown in 2020

Usage of E-commerce have doubled after the pandemic in the Philippines

## 02 technology enhances experience

Technology empowers brands  
to make UX more personal

### MOBILE FIRST

More users are browsing  
and making purchase  
decisions on their phones  
than laptops

### VOICE AND CAMERA SEARCH

Increase in use of Voice  
and Image searches in  
e-commerce sites

### AUGMENTED REALITY INTEGRATION

Personalized shopping  
experience through AR

## NEW REALITIES

shoppers cannot *try on clothes*, feel the fabric, or instantly know if something fits or looks good on them. The *physical disconnection* causes them to *hesitate* on the purchase

## PROBLEM STATEMENT

can we create a Neural Network that allows us to  
*virtually try on clothes?*

## REFERENCE PAPER: CP-VTON+

### **CP-VTON+: Clothing Shape and Texture Preserving Image-Based Virtual Try-On**

Matiur Rahman Minar<sup>1</sup>, Thai Thanh Tuan<sup>1</sup>, Heejune Ahn<sup>1</sup>, Paul L. Rosin<sup>2</sup>, and Yu-Kun Lai<sup>2</sup>

<sup>1</sup>Seoul National University of Science and Technology, South Korea

<sup>2</sup>Cardiff University, UK

## METHODOLOGY

### Image Masking

---

Generates masks containing  
key features of target image

### Clothing Warping

---

Warps clothing image to body  
pose

### Virtual Try-On

---

Fit warped clothes to the target  
image using a NN

## METHODOLOGY

01

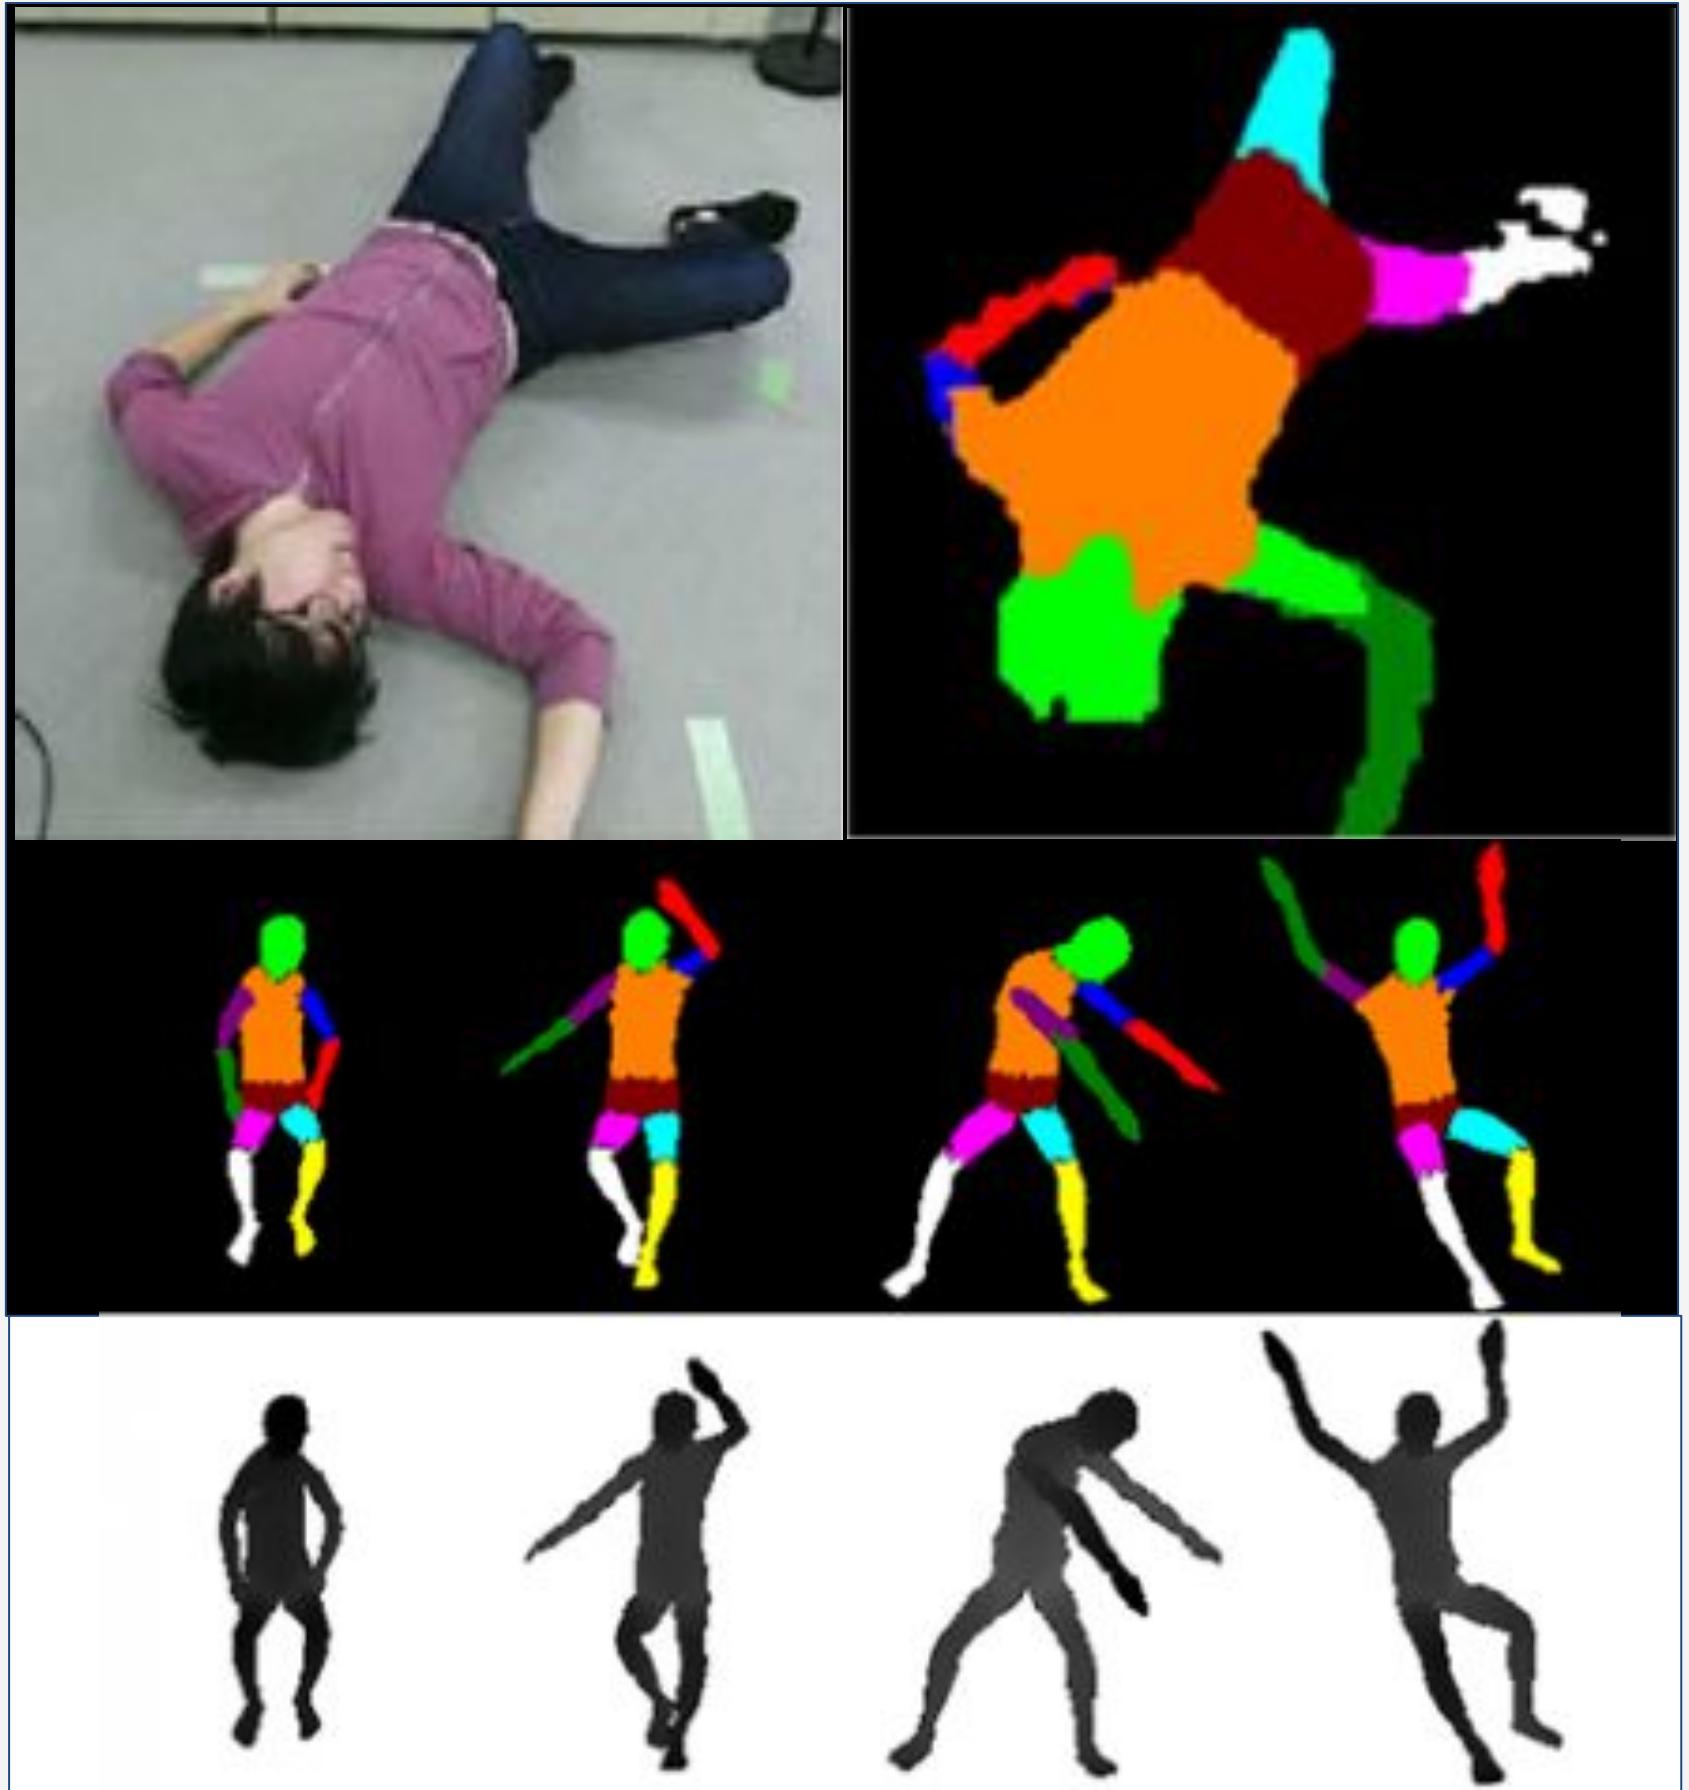

# *Image Masking*

14,500 clothes-person image pairs

### Pretrained Networks

“Part Grouping Network (PGN)” generated  
Body Part Masks

“OpenPose COCO” generated postures

## METHODOLOGY

02

# *Clothing Warping*

---

Pretrained “Geometric Matching Model”  
generated warped clothes

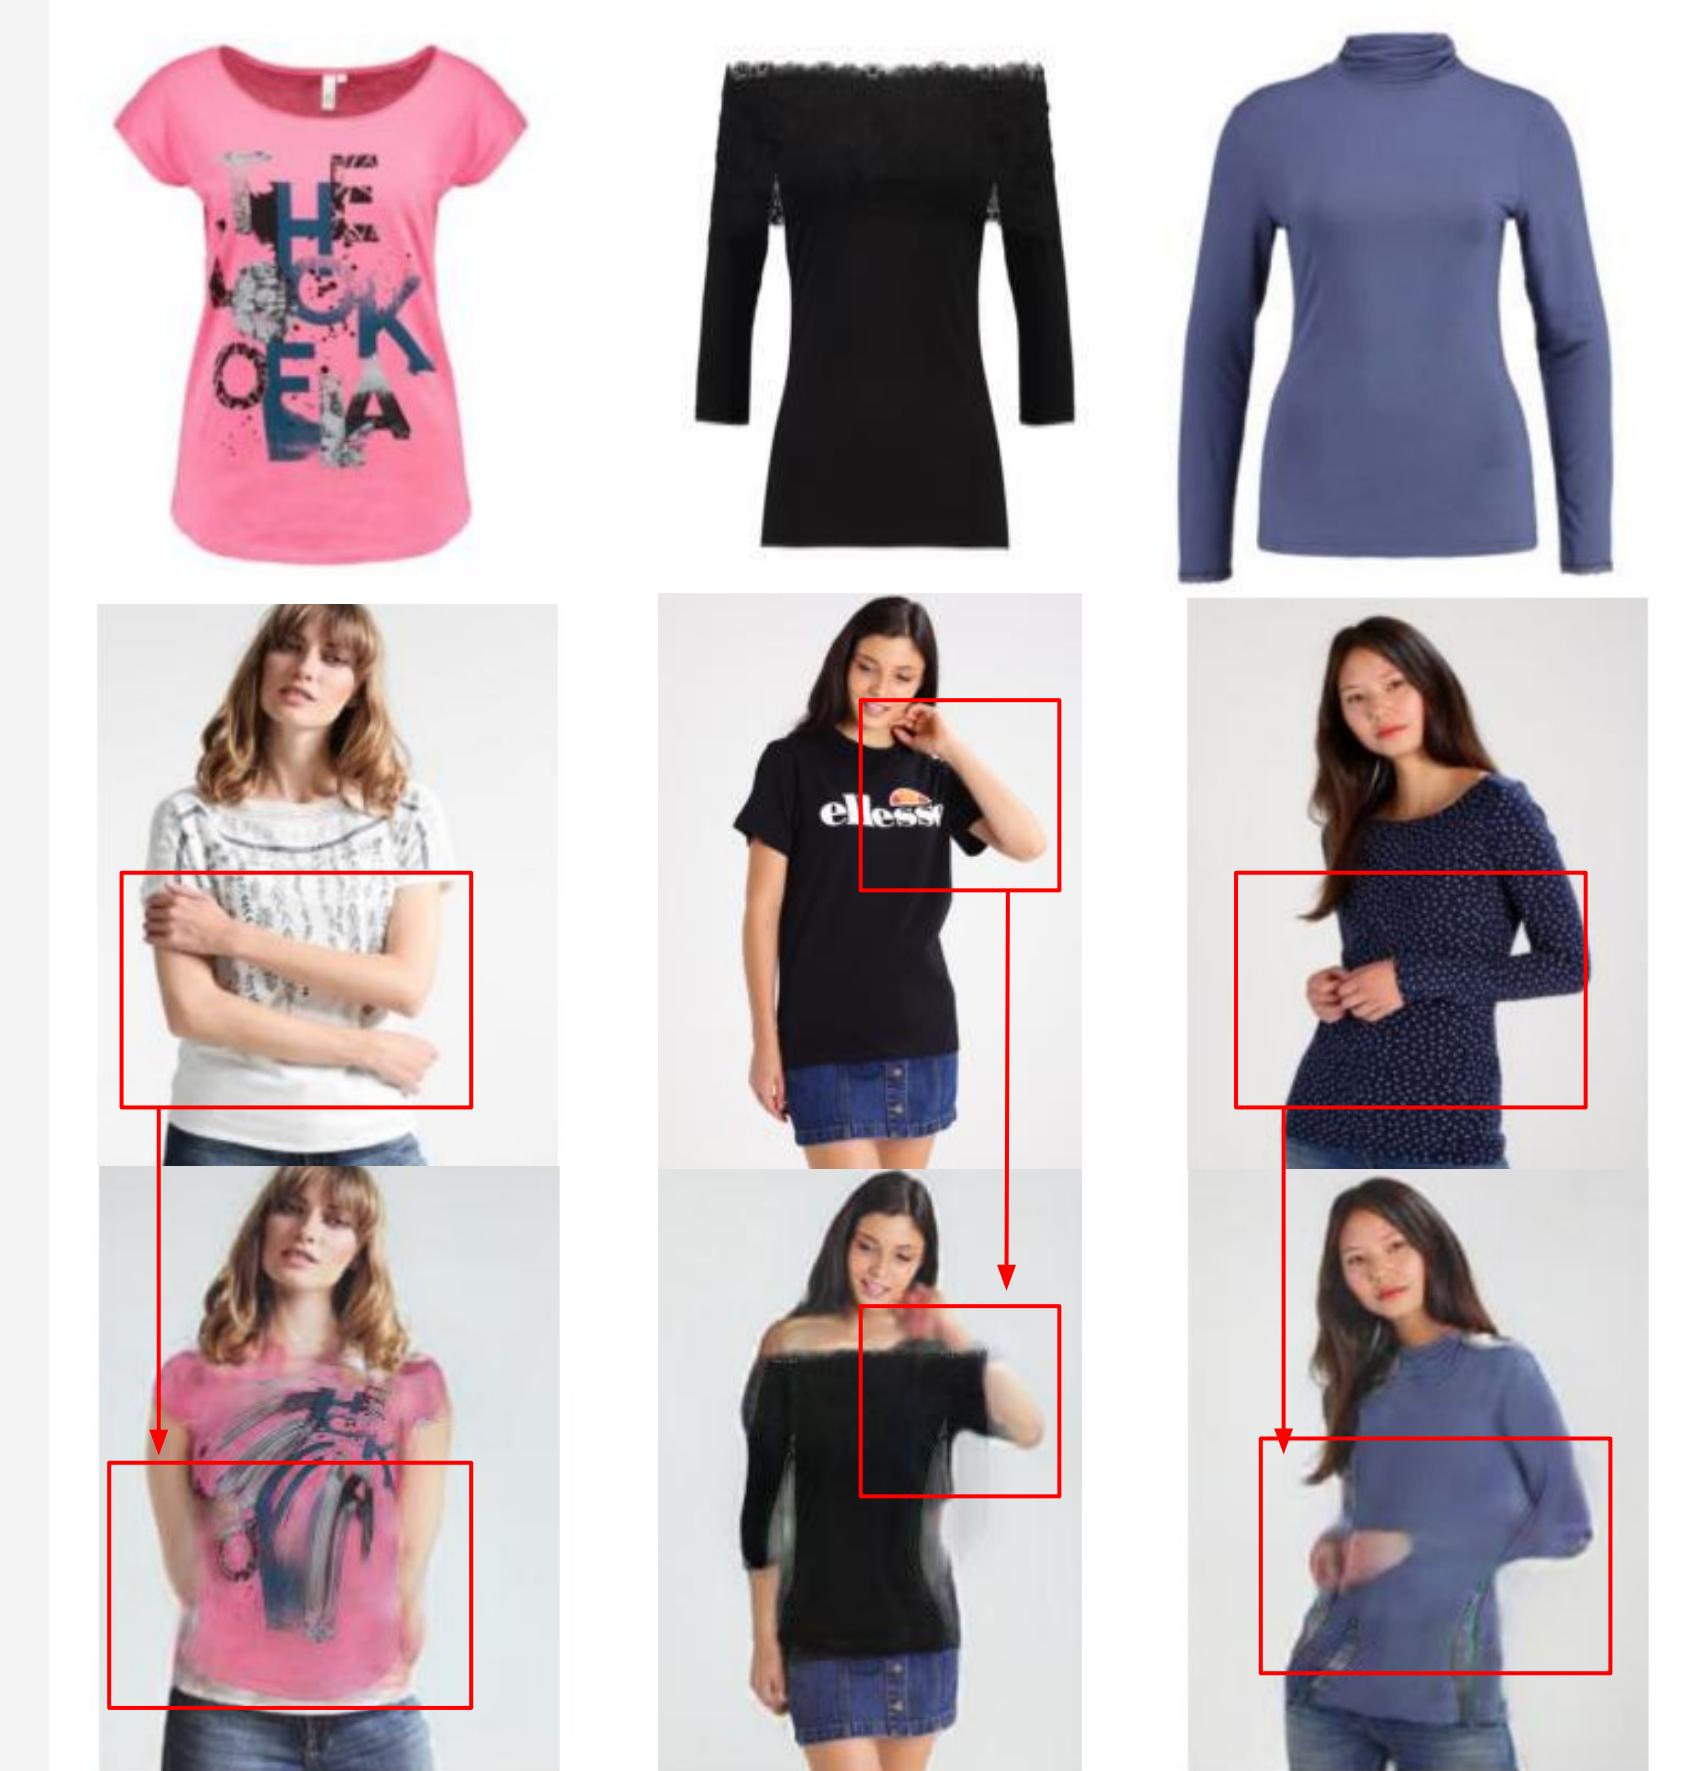

## METHODOLOGY

03

# Virtual Try-on

UNet Generative Model + VGG-19  
Discriminator Model

# NETWORK ARCHITECTURE

## Perceptual Loss

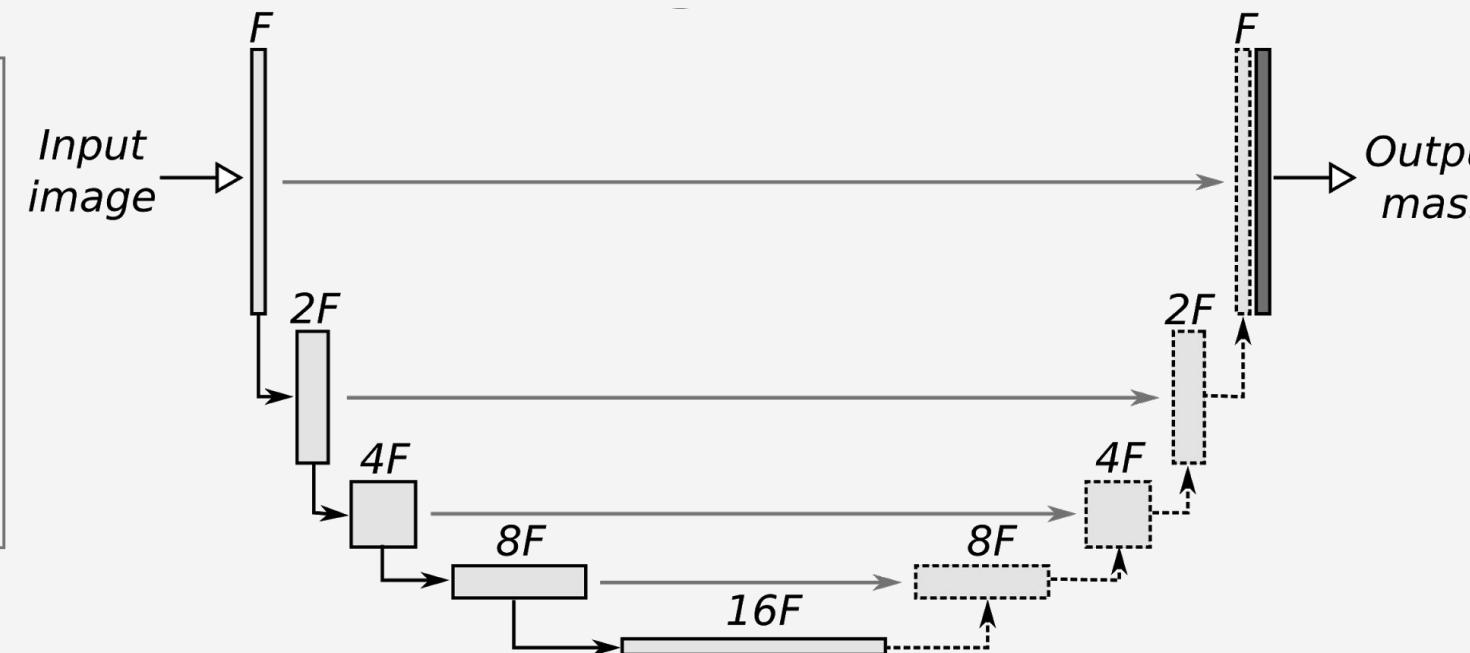

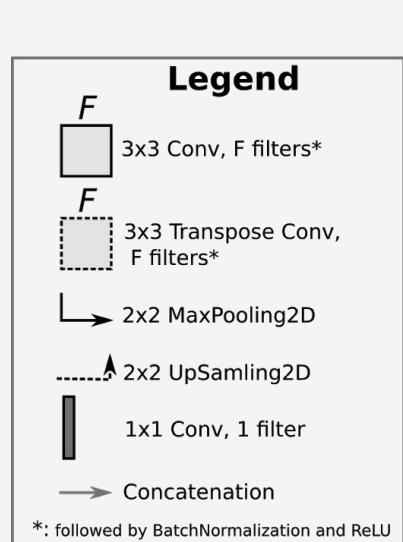

Computes the difference of the two images

$$L1LossFunction = \sum_{i=1}^n |y_{true} - y_{predicted}|$$

$$L_{\text{total}} = L1_{\text{image}} + L1_{\text{mask}} + L1_{\text{VGG}}$$

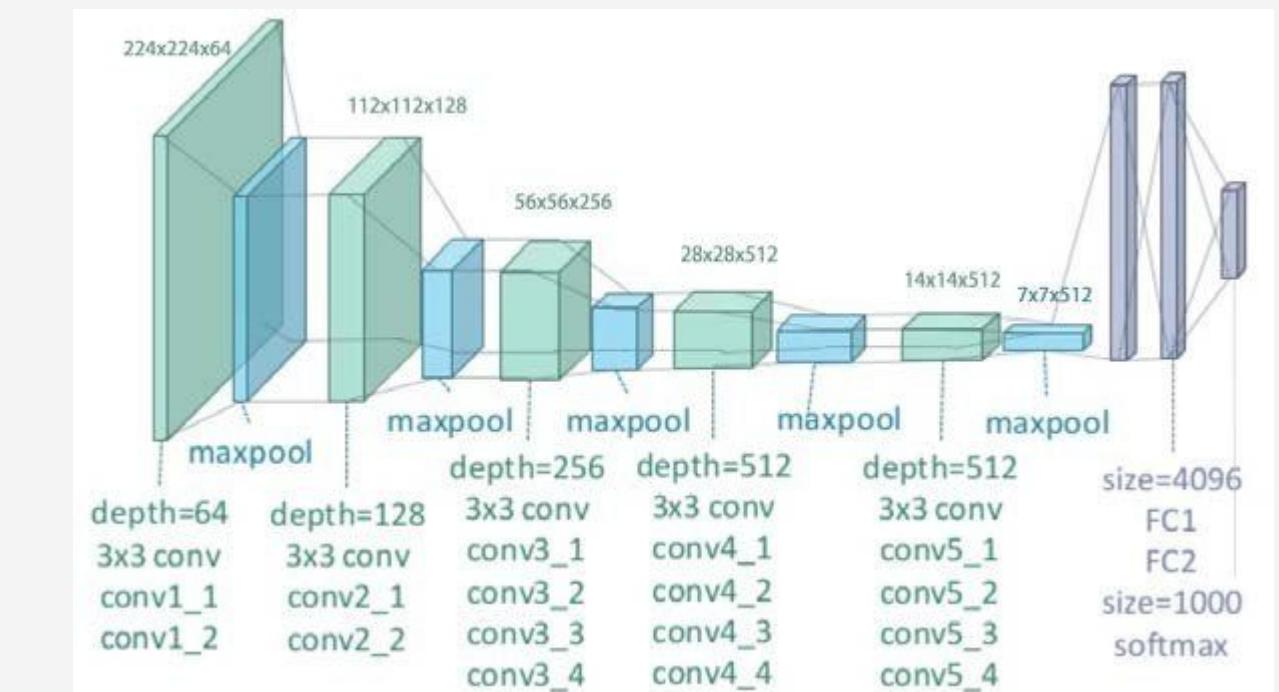

## Generator

U-Net Encoder-Decoder Structure -- 21,350,276 Parameters | 280 MB

## Discriminator

VGG-19 Classifier -- 22,384,192 Parameters | 320MB

## RESULTS: QUANTITATIVE PERFORMANCE v/s BENCHMARKS

	Our Work	CPVTON+	
<b>Structure Similarity Index</b>			similarity between two images taking into account textural differences.
<b>Measure (SSIM)</b>	<b>75.3%</b>	<b>74.3%</b>	Higher similarity, the better!
<b>Learned Perceptual Image Patch</b>			measures the distance between image patches.
<b>Similarity (LPIPS)</b>	<b>25.4%</b>	<b>26.3%</b>	Lower means more similar!
<b>Total Training Time</b>	<b>12 hours</b>		Using GPU and PyTorch. 370, 000 iterations
<b>Execution Time After training</b>	<b>2 seconds</b>		

## RESULTS: QUALITATIVE PERFORMANCE

arms and neck were reconstructed

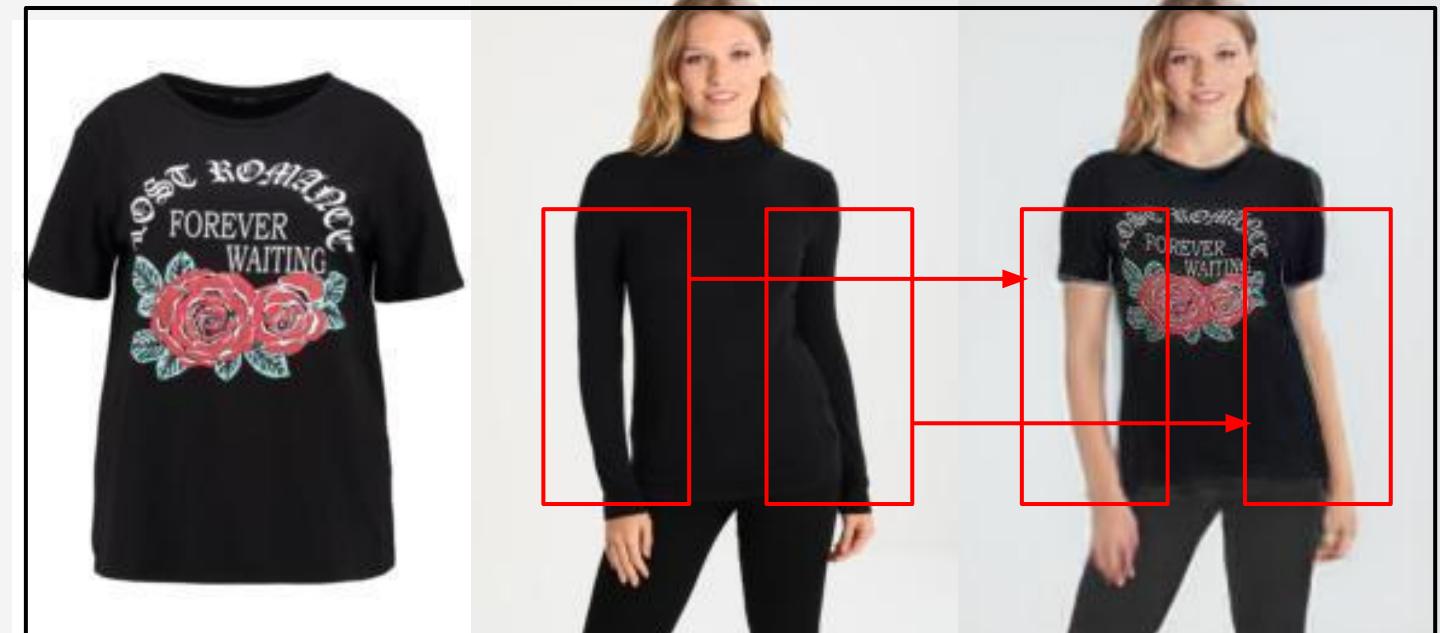

hair was left as is

left arm was left uncovered

arms and neck were reconstructed

## RESULTS: CURRENT LIMITATIONS

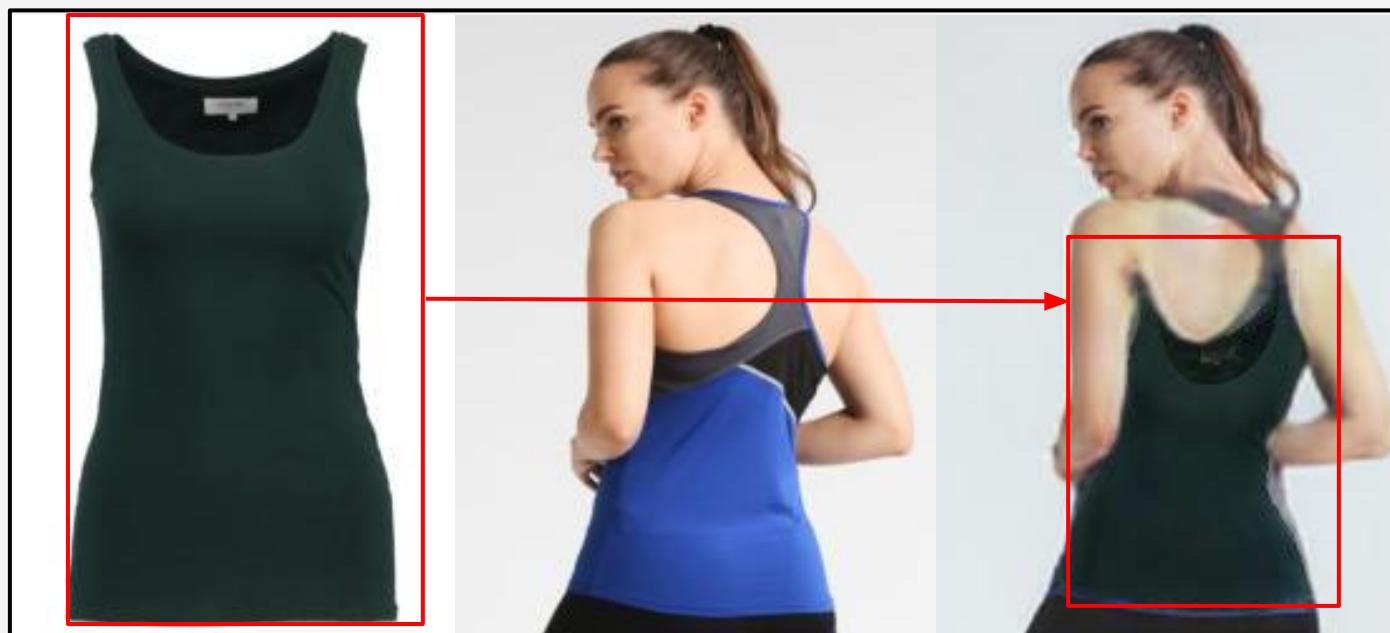

double shirt tried to be fitted as a one

shoulder was interpreted as part of clothes

front view is tried to be fitted to back view

neck was interpreted as part of the clothes

## CONCLUSIONS AND RECOMMENDATIONS

### enhance UX in online shopping

Sukat Online can help fashion brands create a **strong virtual connection** between the shopper and the item

### AR-powered shopping in the horizon

Sukat Online can serve as a start point for incorporating Augmented Reality in the Online Shopping experience

### utilize GANs for more realistic renders

altering both generator and discriminator architecture might give better results.
